

SWIVEL LIMIT BRACKET INSTALLATION INSTRUCTIONS

Swivel action must be limited for hoses and fittings modified for use with Fuel Point to prevent disconnecting the connectors or breaking the hose wire.

This kit provides the parts required to limit the swivel action for hoses with built-in swivels and other special swivel applications. One clamp is used to mount the swivel limit bracket. The second clamp is located on the hose collar and the screw mechanism provides the stopping action.

The kit is made to fit most applications by forming the aluminum bracket (C35767) to the diameter required. The mini hose clamps may be modified to fit smaller diameter applications using a sharp pair of 6" side-cutter pliers. The diagram below shows a typical application.
